

Committee Update Sheet – 15th June 2023

07/2022/00912 – West Lancashire Business Park Item 7

Two late representations have been received, as follows:

With such a large roof coverage, it is really disappointing that these have not, it seems, have any PVs fitted. This is the second large building without them. The car park could also be used to generate sustainable energy as well as cover vehicles and protect them from the increasing level of heat and direct sunlight.

CPRE have produced a report on this which will be available soon.

With the fluctuations in costs of energy, it really is an opportunity missed as well as reducing the need to use energy from fossil fuels.

PV generation as well as looking at wind power should have been looked at and not, it seems dismissed.

And

Neighbouring roads such as Centurion Way have significant issues with HGV's parking adjacent residential properties and this will add further to issues.
